

Weforma – Dämpfungstechnik (Damping Technology) „Made in Germany“

Financial year 2008 extremely successful

Stolberg (Rhineland). – Weforma Dämpfungstechnik GmbH – Manufacturer of hydraulic damping elements with headquarters in Stolberg, near Aachen – reviews an extremely successful financial year 2008. For the sixth consecutive time, the balance reads: best year in the firm's history.

The turnover was substantially increased by 9.5% to the record result of 9.6 million Euros. The consolidated group turnover improved itself to 10.7 million Euros (+ 9.1%).

Thus, in 2008 the market-leader position in the segment of heavy-duty absorbers for storage and retrieval machines could be further extended. With more than 380 standard products, Weforma offers by far the greatest product range of hydraulic industrial absorbers with connecting threads of M4 to M115. Heavy-duty and lift absorbers, as well as feed and damping cylinders round off the extensive range of products.

The basis for the continuing success over the years, as seen by the Managing Directors Armin und Thomas Schmidt, is, above all, the manufacturing „on-site“ and the flexibility in the manufacturing, with regard to modifications and individual special solutions. The market position was also further strengthened by the presence at the trade fair Automatica (Munich), Motek (Stuttgart) and Aandrijftechniek (Utrecht/NL).

As of the 31.12.2008, Weforma, with headquarters in Stolberg, employs 113 staff and a further eleven at a total of six distribution locations in Europe.
